Instructions for Speaker Presentations

Dates

All oral and poster presentations MUST be received by JUNE 14th via this [Google form](#)

Oral Presentations:

- A 12 minute oral presentation should be recorded and saved in MP4 format.
- Your presence will be appreciated for your session, but the recording ensures that no technical issues occur with playing presentations.
- Tips for recording your presentation:
 1. Write a script and practice.
 2. Use a headset with a microphone to ensure that your voice volume remains consistent
 3. Software to record the narration of your presentation include: Powerpoint, Adobe Presenter, Audacity, Google Hangouts, Zoom, PanoptoExpress or another video chat tool. Export the recording in MP4 format. On the conference website under the "Upload Your Presentation", we have put more detailed help and instructions on recording with Powerpoint, Adobe Presenter, and Audacity (<https://2021orchardsystems.com/>).
- Do not go over the allotted time. Videos over 12 minutes will be truncated to fit in the allotted time.

Poster Presentations:

- We require a 5 slide presentation to be made in Powerpoint, Keynote, Illustrator, or similar. It should then be saved and submitted as a PDF with each slide being on a single page. Converting to a PDF will maintain the visual layout of your presentation regardless of the software to create it. We will convert the PDF pages to a video show that automatically rotates through the content. Viewers will be able to pause the video and replay it many times!
- We suggest **5 slides**:
 1. Title with authors and institutions
 2. Problem and Introduction
 3. Methods
 4. Results
 5. Discussion and Conclusions
